Using the Challenge Templates

If you are using the Adobe Illustrator Templates:

Place your artwork in the sublayers of the "Artwork" layer to impose your pieces in the provided Art spaces within the templates.

If you are using the Adobe Photoshop Templates:

Layers for each piece are set up as Smart Objects. To place your artwork in each space...

- 1. Right click the layer for "Piece 1" and select "Edit Contents".*
- 2. A new .psd file will open in a new tab.*
- 3. Go to File > Place (either Linked or Embedded is fine) and select your artwork.*
- 4. Fill the space with your piece, and then save and exit out of the second file.*

The original mockup should now show your artwork in the space that corresponds with that specific layer. Repeat this for each layer to place each piece!
